High Spec Low Calcium
Dry Cow Feed

Now with
1,000mg/kg
VITAMIN E

Good Quality,
Good Value,
Good Advice

 **WYNNSTAY**
FEEDS

The market leader in high specification pre-calver concentrates. 22% protein, high DUP feed, available in 6mm nuts for feeding from 3 weeks pre-calving to calving.

High Quality Protein

High levels of essential amino acids using SOYA and SOPRALIN
High levels of DUP (digestible undegradable protein) which bypass the rumen and give:-

+ 492 litres milk + 0.1% milk protein + improved fertility status

Lactofeed

Contains high levels of lactose, proven at University of Michigan to increase rumen papillae size & health, giving higher dry matter intakes and more efficient feed utilisation – cows will get into milk quicker and have higher peak milk yields.

Healthcare Supplement

Albion Copper 16 MAAC for improved fertility.
Albion Zinc Methionate for lower SCC's and better quality feet.
2mg/kg Selenium including Sel-Plex for improved immune status.

High Levels Of Vitamins, Minerals And Trace Elements

High levels of Vitamin E, D3 & A for better quality colostrum, stronger calves and easier calvings.
Correct balance of Calcium, Phosphorus and Magnesium to minimise the risk of metabolic problems at calving.

Management Guidelines

Dry cows off at 8 weeks and heifers at 10 weeks pre-calving.
Dry off at condition score 3.0-3.25 (maintain BCS through to calving)
Preferably have 2 dry cow groups:

- 8 weeks to 3 weeks pre-calving
- 3 weeks pre-calving to calving

Always offer clean, fresh water
Have clean, fresh barley straw available, ad lib at all times.

Suggested Diets

8wks – 3 wks pre-calving

- Restricted grazing or or grass silage
- Ad lib straw
- Dry Cow Minpot
- Clean water

3 wks pre-calving to calving

- 8kgs DM grass silage or grass + maize silage or lactating TMR (minus milking minerals)
- 2-3 kgs Dry Tec-L
- Dry Cow Minpot
- 2-3 kgs straw
- Clean water
