

WYNNGOLD™

Typical Feeding Regime

6 week weaning

All calves should receive 4 litres of colostrum within 6 hours of birth and would benefit from 2 litres of colostrum twice/day for the first 3 days of life.

TWICE/DAY RESTRICTED FEEDING
Mix milk at 125g in a litre of water
(Litres of milk/feed)

ONCE/DAY RESTRICTED FEEDING
Mix milk at 170g in a litre of water
(Litres of milk/feed)

DAYS ON MILK	MORNING	EVENING	DAYS ON MILK	MORNING	EVENING
Day 1 - Day 34	2	2	Day 1-4	2	2
35 to 36	1.75	1.75	5 to 7	2.5	1.5
37 to 38	1.5	1.5	8 to 35	3	nil
39 to 40	1.25	1.25	36 to 38	2	nil
41	1	1	39 to 40	1.5	nil
42	nil	1	41	1	nil
			42	0.5	nil

Weaning

Commence weaning when the calf has gained 25kg (approx 35 days). Finish weaning when calves are eating 1 kg of starter feed on 3 consecutive days. Continue to offer starter feed ad lib until consumption reaches 3kg at 12 weeks.

N.B. Full mixing and feeding instructions are printed on every WynnGold bag.

Good Advice*

**WYNNSTAY
FEEDS**

The WynnGold range of calf milk powders has been formulated to give your high value calves the best possible start in life. Whatever your rearing system and production targets, there's a WynnGold product to meet your needs.

Colostrum Feeding

The performance of calves on WynnGold milk powders will be boosted significantly if they have received adequate quantities of high quality colostrum.

- When a calf is born it has no antibodies to fight disease and is highly vulnerable to infection. Newborn calves need a minimum of 4 litres of high quality colostrum within 6 hours of birth - ideally from the first milk.
- Keep a supply of frozen colostrum to defrost and feed in case none is available at the time of birth.
- Consider feeding colostrum for as long as you can, As well as being absorbed into the blood, colostral antibodies also offer the calf local protection from viruses and bacteria in the gut.

Roughage and Hygiene Guide

Introduce barley straw or stalky hay at 30 days of age and always ensure calves are bedded on clean, dry straw and have access to ad lib clean, fresh water.

Wynnstay are main agents for the supply of Holm & Laue and Volac computerised calf machines. Please ask for more details or visit our You Tube video at www.youtube.com/watch?v=SH2RRN39BoKQ

- Greenline/Protimax or Gardion Health Package
- Enhanced vitamins levels to combat stress

* These are specialist milks available to order, minimum 40 x 25kg

The WynnGold Rich Cream, Bloom, Thrive, Turbo and Contractor milk powders incorporate a unique health package to boost calf vitality. The package includes a bile stimulant - to help the calf absorb more energy from the milk powder and translate it into growth - and stress-busting levels of vitamin C and E to boost vitality and help prevent white muscle disease.

These milk powders also incorporate a 'mother smell' stimulant to encourage earlier acclimatisation to machine feeding and better early life intakes.
